

Assignment

Name

MuFaz Aslam

Reg
Section

SP22-BCS-051

A

i) Initialization:-

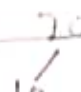

Node & root = Null; initialize an empty AVL tree.

ii) Insertion

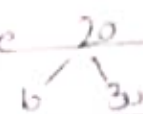

Insert 10:

- The root become 10.

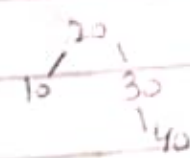

Insert 20

- The tree become 

Insert 30

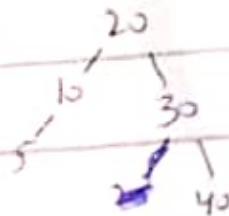

- The tree become 

Insert 40

- The tree become 

Insert 5

The tree become

Inorder

In

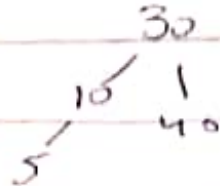

Inorder Traversal:

In order traversal of AVL tree

5, 10, 20, 30, 40

Deletion

• Delete 20: deleteNode(root, 20).

In order traversal after deletion

In order traversal after deletion. 5, 10

30, 40

Search

Search for 50: search(root, 50)

50 not found in AVL tree

Output

The program prints the inorder traversal before and after deletion and indicate whether the search key is not found.
